

Chez Mimi

Lacs et montagnes du Haut Doubs - Mouthe

Combe de la bâtie (PNRHJ / Gilles Prost)

Between France and Switzerland, an easy walk through a landscape of combes. In the summer, the animals' cowbells ring out around the chalets, former stopovers where smugglers once operated.

This short yet enjoyable walk including combes, meadows, woods and forests takes you from chalet to chalet in a rural atmosphere, at the heart of a site that is classified as a Sensitive Natural Area by the French department of Doubs due to its remarkable landscape, wildlife, floral and geological heritage.

Useful information

Practice : Hiking

Duration : 1 h 50

Length : 5.6 km

Trek ascent : 86 m

Difficulty : Easy

Type : Circular

Themes : Fauna – Flora,
Pastoralism and agriculture

Trek

Departure : Chez Liadet near Mouthe

Arrival : Chez Liadet near Mouthe

Markings :  PR® (Walking & hiking trail)

From the parking lot in the **CHEZ LIADET** hamlet, this walk starts (yellow and blue waymarking) slow through a road that winds through the combe, heading past the **Plaine Chez Liadet** and continuing until the intersection at **les Bâties**. The trail then branches off to the left on a wide gravel road before coming to la Bâtie-Dessus.

Going past the chalet, the trail continues for 500 m before turning left and entering a forest that soon leads to a large clearing.

The trail leaves the main path, taking a grassy path to the left, in the middle of a wooded meadow, towards Chez Bougaud.

To the left of the house, at the trail's highest point (1155m), a gravel road heads downhill to the bottom of a combe bordered by closed pastures. In the dip, at the intersection of several paths, the circuit heads left and reaches the Chez Greset mountain chalet.

In front of the chalet, to the left, after 500 m a good path will lead you to the intersection at Chez Mimi. The path continues to the left for a few meters, before heading downwards to the right on a wide path through the forest leading to **Plaine Chez Liadet**, and your starting point.

All useful information

Advices

This trail passes through the Sensitive Natural Area of les Bâties. It passes through private property pastures with livestock and forest paths. To respect the owners and farmers granting you passage, and for the security of livestock and wild fauna, we ask that you remain on the waymarked paths. Use the adapted passageways to get across fencing and be sure to close gateways behind you. Lastly, please keep your dog on a lead if you have one.

Wild flowers are beautiful, they may be rare and protected and often wilt quickly. Do not pick them! They will delight the next hikers.

In case of forest works (felling, skidding, etc.), for your safety, know when to stop and turn around.

Environmental sensitive areas

Along your trek, you will go through sensitive areas related to the presence of a specific species or environment. In these areas, an appropriate behaviour allows to contribute to their preservation. For detailed information, specific forms are accessible for each area.

Western capercaillie

Sensitivity period: January, February, March, April, May, June, Decembre

Contact: Parc naturel régional du Haut-Jura

Le Grand Tétrás est une espèce emblématique des forêts de montagnes françaises. Son apparence et son comportement font de lui un oiseau très atypique. Pouvoir l'observer relève d'un vrai défi, tant cet oiseau est discret, mais s'avère être un souvenir mémorable.

En hiver, son activité est réduite au minimum. Il passe la quasi-totalité de la journée perché dans un arbre et consomme uniquement des aiguilles de sapin. Une nourriture très peu énergétique. Cette période est critique pour sa survie. Un oiseau subissant un dérangement régulier va puiser dans ses maigres réserves et finir par en subir les conséquences. Sa sensibilité à la prédation aura augmenté, ou bien il dépérira simplement à cause du manque d'énergie. Une autre période critique prend place du printemps au début de l'été avec la couvaison. Si la poule est surprise plusieurs fois, elle va abandonner le nid et laisser ses poussins seuls, sans protection. La survie des jeunes étant déjà très faible naturellement, ce phénomène accentue, d'autant plus, ce risque de mortalité chez les jeunes oiseaux.

Les pratiques qui peuvent avoir une interaction avec le Grand tétras en période de nidification sont principalement les pratiques sportives terrestres comme la randonnée, le ski, le VTT.

Altimetric profile

Min elevation 1079 m
Max elevation 1157 m

Transports

To visit and get about in the High-Jura, visit www.reshaut-jura.fr, the eco-mobility portal listing all means of transport within the Park.

Access

4 km south of Mouthe via the D 389 towards the Charbonnières in Switzerland, then access the parking lot in Chez Liadet, where the cross-country ski pistes start

Advised parking

In the Chez Liadet hamlet

On a discovery of the "les bâties" trail (A)

Eight markers are scattered along this trail to help you to discover the typical mountain pastures of the Jura mountain, moulded over time by nature and human activity. From geology to mountain pastures, to its pastures and chalets, whilst passing through forests, woodlands and low dry-stone walls, this circuit takes you, step-by step, on a discovery of the secrets of this Sensitive Natural Area of the *Département* of the Doubs (booklet available at the Tourist Office and at the Chez Liadet gîte).

The Eurasian Pygmy Owl, a small mountain owl (B)

Measuring only 17 cm (like a starling), this species is the smallest owl in Europe. It appreciated old spruce or fir tree forests, mixed with deciduous trees and uses the cavities dug by other birds, such as woodpeckers, to lay its eggs. This owl is partly diurnal (it is active during the day), and mainly feeds on small birds and mammals (vole, field mice, etc.).

The Summer Chalets (C)

During the 16th century, to accommodate livestock during the summer, offer housing to the shepherd and the cheese-maker and to ensure the production of Comté cheese, solid chalets were built with all necessary equipment to handle livestock and transform milk into butter and cheese. They housed large stables, a small home and a room to make cheese, where the pot was suspended under the chimney. Today, some of these chalets have kept their pastoral function, by accommodating livestock, whilst others have disappeared or now serve as shelters, restaurants, holiday homes, etc.

Traces of a “sanglier”? (D)

Under the bark of spruce trunks is where the sanglier’s raw material can be found. But not the animal (sanglier means wild boar in French)! The Sanglier is the less-wary artisan who bears the same name. From the inner bark, the Sanglier creates “Sangles”, long straps that are used to wrap a certain cheese: the Vacherin Mont d’Or (a cheese with a protection designation of origin). It is these “sangles” that will give the cheese its characteristic woody flavour.

The great yellow gentian or the false helleborine? (E)

Did you know? The false helleborine, a toxic plant, closely resembles the great yellow gentian. When not in flower, you can differentiate them by comparing their leaves: those of the gentian are opposite (facing each other on the stem), while those of the false helleborine are alternate (i.e, they are positioned alternately). The gentian’s roots, when macerated and distilled, can serve to make a well-known digestive alcohol.

The ring ouzel (F)

This large white-breasted thrush returns to the Jura in April after spending the winter in North Africa. It favours wooded meadows and woodlands. In mountain pastures, it can be found looking for worms to feed on when the snow starts to melt, in areas still wet from ice water.

Pastures and bell-wearing herds (G)

In the High-Doubs as in the High Jura, the ringing of bells represents both a rite and the love of musical harmony. And each cow has its own bell! With the sound of the bells, and from this infinite variety, comes the music of an entire herd. The “*désalpe*”, which used to mark the descent of the mountain herds, could be heard 5 km away as the crow flies helped by favourable winds. The deafening sound of the heavy bells around the cows’ necks marked the end of the summer. An audio marker in our landscapes, the soft sound of the bells will give a rhythm to your steps along this itinerary.

The Eurasian lynx (H)

This emblematic feline needs a vast territory with a large forest massif. It certainly needs space: the female’s territory is close to 200 km²n and that of a male is closer to 400 km²! A solitary animal, male and female lynx only meet during mating season, from February to April.
