

Pic de l'Aigle (Eagle Peak)

Haut-Jura Grandvaux - La Chaux-Du-Dombief

Les 3 lacs (PNRHJ / Jean-Philippe Macchioni)

During this wooded and riparian walk, the rocky barrier that marks the transition from the lake region to the Grandvaux plateau gives way to the Pic de l'Aigle (Eagle Peak) and the Belvedere of the Four Lakes.

"Place-names dating back to the druids, the path to a monastery under the waters of the Ilay lake, the whirling of birds of prey over the vestiges of the Aigle château. You are in the "Little Scotland" described by Charles Nodier... Where legends are born!"

Marc Forestier (Dakota Edition, Que Faire dans le Parc naturel régional du Haut-Jura - What to do in the natural regional park of the High-Jura)

Useful information

Practice : Hiking

Duration : 3 h

Length : 9.8 km

Trek ascent : 329 m

Difficulty : Moderate

Type : Circular

Themes : Fauna – Flora, Lakes, rivers and waterfalls, Landscapes

Trek

Departure : Pic de l'Aigle parking lot in Chaux-du-Dombief

Arrival : Pic de l'Aigle parking lot in Chaux-du-Dombief

Markings :  GR® (Long distance)  PR® (Walking & hiking trail)

From the **PEAK PARKING LOT**, the rocky trail ascends (yellow waymarking) to the north until it reaches the **Foot of the peak** across a healthy dry lawn. After climbing a steep slope (white and red waymarking) for 200 m, you will reach the **PIC DE L'AIGLE**.

The walk continues to the northeast winding along the wooded ridge. It nears a forest road twice and leads to the **Belvedere of the Three Lakes**, Ilay, Great Maclu and Little Maclu.

Staying on the edge of the ridge, a stony trail will lead you to the **BELVEDERE OF THE FOUR LAKES** (interpretive sign) surrounded by fir trees.

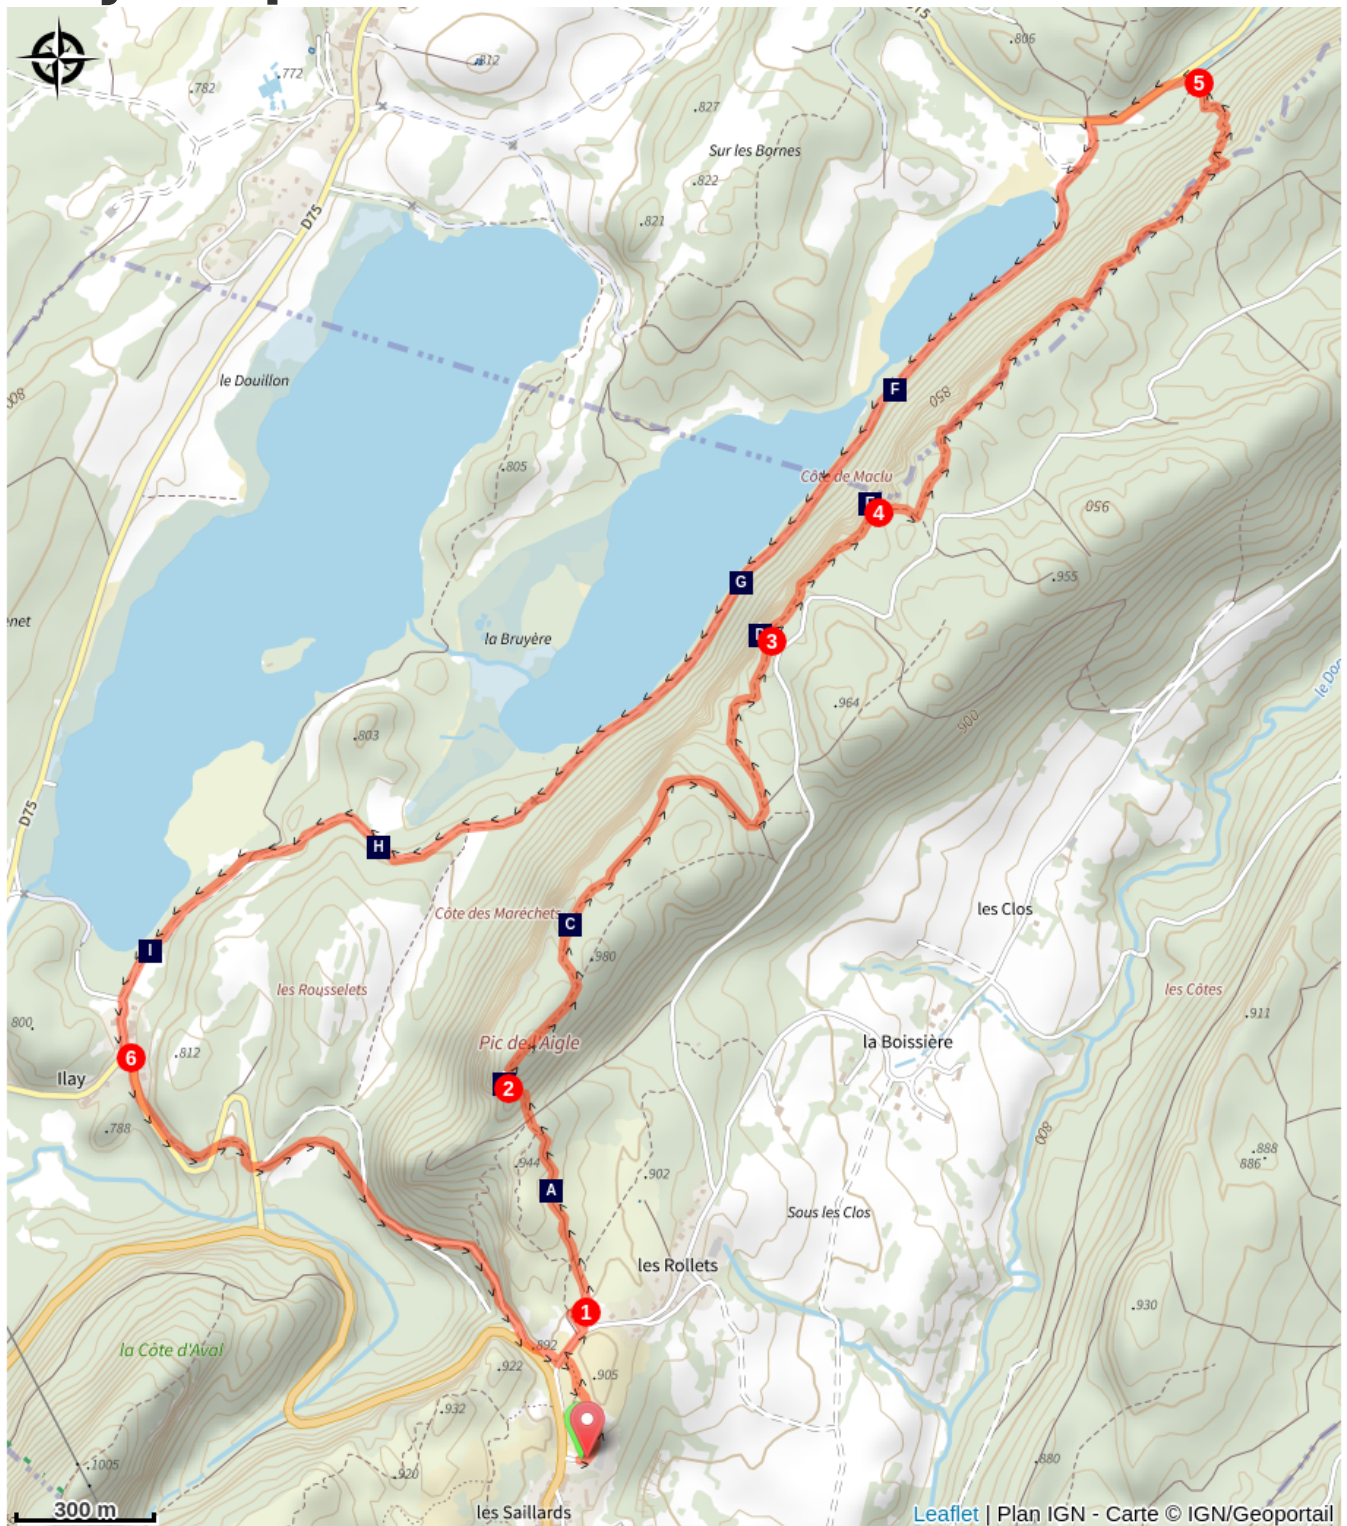

The trail ascends to the right towards the **Belvedere Parking Lot**, below the Ban forest road.

The path to the left - an extension of another trail - follows along the ridge marked by a set of cliffs without ever approaching it. After a quick winding descent, which can be slippery during humid weather, the trail meets the edge of the D 75 at the **Côte du Maclu**.

Using the cycling lane to the left of the roadside (yellow waymarking), head to the **LITTLE MACLU LAKE** (parking lot). The path then follows along the Little Maclu and Grand Maclu lakes towards Ilay. From the **Chemin des Lacs**, the road to the left opens onto **les Rousselets** and its chapel, nestled between two trees.

Follow the road to the left (white and red waymarking) and take a trail that crosses the D39 twice. The well-delineated path (former tramline) gradually ascends towards "**Chemin du Château**". The trail then becomes steep until it reaches the **Foot of the peak**. From here, you can head back to your starting point (yellow waymarking).

All useful information

Advices

Be careful, in the winter, the walk up to the pic de l'Aigle can be slippery due to ice: know when to stop! There is a steep and sometimes slippery section in the descent to access the lakes.

This trail passes through pastures with livestock and forest paths. To respect the owners and farmers granting you passage, and for the security of livestock and wild fauna, we ask that you remain on the waymarked paths.

Use the adapted passageways to get across fencing and be sure to close gateways behind you. Please keep your dog on a lead if you have one.

Wild flowers are beautiful, they may be rare and protected and often wilt quickly. Do not pick them! They will delight the next hikers.

In case of forest works (felling, skidding, etc.), for your safety, know when to stop and turn around.

Environmental sensitive areas

Au cours de votre itinéraire, vous allez traverser des zones sensibles en rapport avec la présence d'une espèce ou d'un environnement spécifique. Dans ces zones, un comportement approprié permet de contribuer à leurs préservations. Pour plus d'information, des fiches sont disponibles pour chaque zone.

Zone de tranquillité de la vie sauvage des 4 Lacs

Sensitivity period: April, May, June, July, August, September

Contact: **Parc naturel régional du Haut-Jura**

29 Le Village
39310 Lajoux
03 84 34 12 30
www.parc-haut-jura.fr/

Le périmètre de la zone de tranquillité est concerté (Parc, CEN, Communes, Syndicat de gestion du Lac d'Ilay), et non réglementaire. Pour la tranquillité de la faune et de la flore du secteur concerné, entre les lacs d'Ilay, du Grand Maclu et du Petit Maclu, il est demandé de ne pas pénétrer la zone de mi avril à mi septembre.

Elle inclut les interdictions valables sur l'ensemble des 4 Lacs (arrêtés municipaux et préfectoral) :

- Pas de camping/bivouac sauvages
- Pas de feu
- Pas de baignade

- Pas d'activité nautiques (paddle, bouée, kayak, etc.) ; seuls les pêcheurs ont le droit de naviguer
- Pas de nuisances sonores

Altimetric profile

Min elevation 775 m
Max elevation 991 m

Transports

To visit and get about in the High-Jura, visit www.reshaut-jura.fr, the eco-mobility portal listing all means of transport within the Park.

Access

10 km northwest of Saint-Laurent-en-Grandvaux via the D 678.

Advised parking

north of the village, leave the D678, towards pic de l'Aigle

On your path...

Dry grasslands (A)

The path that leads up to the peak takes a short journey through sparse vegetation, called dry grasslands. This is where a vegetal diversity that is unique to calcareous slabs and rocks can be found. In addition to various orchids, the successive blooming of various small plants is as remarkable as the diversity of shrubs such as the alemanchier, common barberry or Mougeot's whitebeam.

The Peak is a favoured observation post to see the common raven or the peregrine falcon. These two species nest on the nearby cliffs.

Attribution : PNRHJ / Pierre Levisse

Belvedere of the Pic de l'Aigle (Eagle's peak) (B)

"A large staircase with a handrail and a few steps carved into the rock will lead you to an altitude of 990m. From there unfolds a wide panorama, well described by the observation post. The High-Jura is visible in-depth, with the lines of the successive ridges of its forest and the naked roundness of the Jura mountains. Beyond, the Mont Blanc is also visible near the Givrine pass. Over by the Ain combe, the distant relief of the Mâconnais appear in a bluish blur."

Marc Forestier ("Que faire dans le Parc naturel régional du Haut-Jura", What to do in the High-Jura Regional Natural Park, Dakota Edition)

The Chamois, an unparalleled mountaineer (C)

Whilst the Chamois is capable of travelling across a 1,000-meter incline in a quarter of an hour, most hikers are only able to climb 1,000 meters in 3 hours. Even an experienced athlete would need one hour to climb such an incline. If the Chamois is such a good climber it is because it has an enlarged heart that is capable of pumping blood through its body at an alarming rate, twice as fast as a human heart, and because it has hooves with two nails that can separate for better adherence to the rocks. A partition between its “fingers”, covered with fur, prevents it from delving too deep into the snow, in a similar way to our snowshoes.

Meeting this species, like others, is very much a question of luck and a significant amount of patience! But once you glimpse one, do not move and it will allow you to watch it for a good while.

Attribution : PNRHJ / Léo Poudré

Belvedere of the Three Lakes (D)

The “lagoon” colours of these lakes is a result of the formation of a “limestone vegetation ledge” around them. The shallow waters near the bank warm faster. Due to a chemical reaction, “hot” water is less capable of dissolving CO₂. More abundant phytoplankton “absorb” the CO₂ dissolved through photosynthesis. Water acidity is therefore slightly reduced. These two factors, when combined, mean that the calcite “drips” and forms “white mud”, full of chalk.

Belvedere of the Four Lakes (E)

The belvedere of the 4 lakes provides an overall view over the valley of the lakes, a remnant of the last glaciation: Narlay, Ilay, the Petit Maclu and the Grand Maclu. Do you know the legend of the Lake of Narlay? It is said that it covers the location of a village flooded by water. One Christmas night, a faerie requested asylum for one night from all of its inhabitants, in vain, as only the poorest of them offered her refuge. Angered, the next day, the faerie flooded the entire village, save for her host's home located on the edge of the lake. The new village of Narlay was rebuilt around the house that was spared, but every year, at Christmas, the cockerel in the drowned village signs for the twelve strikes of midnight.

The asp viper (F)

Widely present in the marsh area between the Petit Maclu and the Grand Maclu, the asp viper is a poor swimmer and seeks sunny areas to ensure its metabolism can function properly. Like many reptiles, it is fearful and has a talent for detecting vibrations. To avoid bothering this species and being bitten, stamp your feet and be careful not to squash it, it will hide well before you even see it!

Natural lakes, a fragile heritage (G)

The waters of the Petit Maclu and the Grand Maclu feed the lake of Ilay. Each occupies a shallow basin dug out by the glaciers around 20,000 years ago.

These lakes are mainly surrounded by a wide diversity of vegetation, called low-marshes, wet tall-herb and fern fringes or peat bogs. Some reed beds also develop there. Insects flourish here due to the high quality of the environment, in particular dragonflies who vary in colour. The Eurasian coot is the most faithful bird to these lakes. Not very discreet, it is recognisable by its trumpeting cries of warning.

A natural managed site (H)

The Franche-Comté conservatory for natural areas manages the wetlands on the 4 lakes site in partnership with the owning municipalities and local farmers. This site is full of species specific to open environments which must be preserved.

Once used by farmers, these zones have gradually been abandoned. This is why managers have made maintaining this type of environment a priority by reinstating extensive grazing.

Highland Cattle cows are able to move around on waterlogged soil and find the food that they need. The amount of cattle and grazing periods are adapted depending on the species and environments in question.

A site sheet dedicated to the wetlands on the 4 lakes site is available online:

The island of La Motte (I)

Centred between the banks of the lake of Ilay is an island: the island of La Motte. Archaeological excavations have revealed that it was home to three successive religious establishments. An initial church was erected around the year 1,000 and seems to have burned down. After being rebuilt, a vestibule was added to it by a monastic congregation that ended up abandoning the place. Of the third establishment, we know only that it was abandoned during the 15th century. A wooden bridge provided access to the structure from the bank and the marshes that are now present were once orchards and pastures.
