

The lakes of Étival

Terre d'Emeraude - Etival

Lacs d'Etival (PNRHJ / François Bailly-Maître)

At the foot of long wooded cliffs, where herds of chamois like to hide, the two romantic lakes of Étival can be found, remnants of the glaciers that used to cover and plane the Jura during the Quaternary.

"Every summer, from 1884, the family meets at Étival (...). From the terrace behind the house, the view looks over a vast patchwork of pastures scattered with livestock and cultivated fields. Beyond, the reassuring horizon of the Jura, covered with beech and fir woods, where bluish greys and mauves turn to gold in the setting sun. Ox teams pulling hay or lumber* bring this environment to life." Jean Challié; Laurence Buffet – Challié

Lumber*: freshly cut and debranched fir trees

Useful information

Practice : Hiking

Duration : 3 h

Length : 7.9 km

Trek ascent : 209 m

Difficulty : Moderate

Type : Circular

Themes : Fauna – Flora, Lakes, rivers and waterfalls, Landscapes

Trek

Departure : Parking along the "route des lacs" in Étival

Arrival : Parking along the "route des lacs" in Étival

Markings :  PR® (Walking & hiking trail)

From **ETIVAL - THE LAKES**, follow the road (yellow waymarking) that cuts between the two Lakes to reach **The top of the Lakes**. Continue to the right, heading past and along the **Great Lake** (peat bogs south of the lake) to join up with a forest path at the **A Tout Fromant** crossroads.

To the left, the forest path will lead you to the **Chemin du Calvaire** (waterfalls). Then climb up the path to your left, that leads to the ridge at **La Sea**.

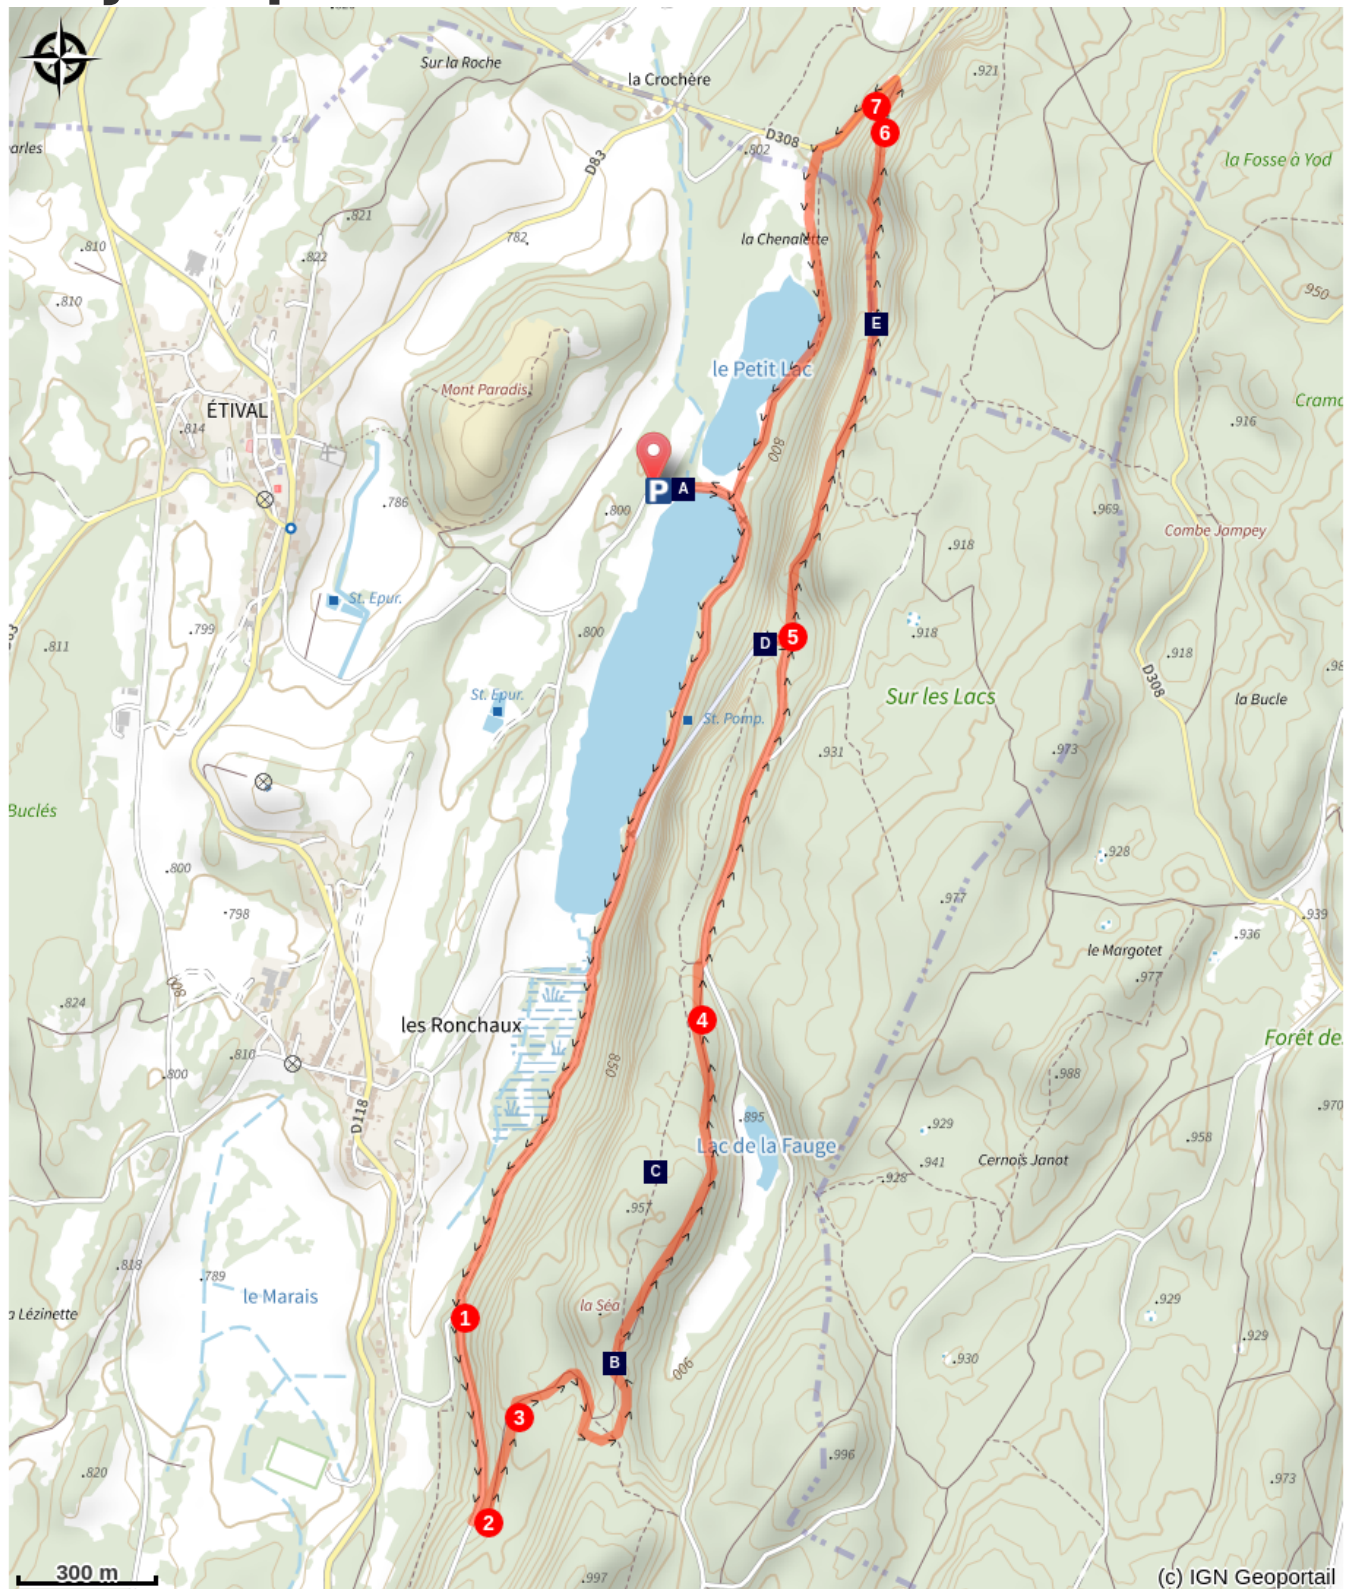

The path continues along the wooded ridge to the left, from which you can make out the discrete lake of la Fauge to the right in its combe. Head to **L'Espinois**, on the edge of the forest road.

Head back up the ridge to the left and follow the gravel trail. Using this trail, join up with the road (a steep descent on a narrow trail through the trees) and reach the **BELVEDERE OF THE ETIVAL LAKES**.

Follow the forest path to the north, leading to **Sur les Lacs**. Continuing in the same direction, gradually head down through the forest (the path is muddy in some areas) to reach the D 308 in **Champs Gadout**.

Take the road to the left for 200 m, then branch off to the left and follow along the forest edge (wet path) before following along the bank of the small Etival lake and returning to your starting point.

On your path...

Echoes on the lake (A)

The Chamois: A fleece for every season (C)

The Eurasian lynx, an emblematic animal of the Jura mountains (E)

The black woodpecker (B)

Belvedere of the Étival lakes (D)

All useful information

Advices

This trail uses forest paths. To respect the owners and farmers granting you passage, and for the security of livestock and wild fauna, we ask that you remain on the waymarked paths.

Please keep your dog on a lead if you have one.

Wild flowers are beautiful, they may be rare and protected and often wilt quickly. Do not pick them! They will delight the next hikers.

In case of forest works (felling, skidding, etc.), for your safety, know when to stop and turn around.

Altimetric profile

Min elevation 793 m
Max elevation 944 m

Transports

To visit and get about in the High-Jura, visit www.reshaut-jura.fr, the eco-mobility portal listing all means of transport within the Park.

Access

11 km south of Clairvaux-les-Lacs via the D 118 and 15 km from Moirans-en-Montagne via the D 242 through les Crozets. At the village of Etival, follow the "route des Lacs" for 1.4 km.

Advised parking

1.5 km from the village, via "route des lacs"

On your path...

Echoes on the lake (A)

All sounds can be found in nature. In these limestone reliefs, the tiniest vibration rings out: here acoustic sites are common, so open your ears to hear the surprising concerto offered by the Jura's landscapes. Any sounds made in this pretty combe are amplified by the cliff, and especially by the lake. This site offering a single echo provides both a quality landscape and quality acoustics. For this reason, the site is used for cultural events.

The black woodpecker (B)

The black woodpecker, with a red crown, is the largest woodpecker in Europe and is roughly the size of a carrion crow, which is also black. In spring, it is easily recognisable due to the loud "kree-kree-kree" call that it makes whilst in flight. It chips large oval nesting chambers into trees, often beech trees, which can then be used by the boreal owl the following year.

Attribution : Fabrice Croset

The Chamois: A fleece for every season (C)

The chamois' coat varies with the seasons; in winter, its fleece takes on a dark brown to black tint, which allows it to absorb heat; whilst in summer, its coat is beige or light brown. But it's not only its colour that changes! In winter, its coat becomes thicker in order to protect it from the cold, and it can reach up to 10 to 12 cm thick, compared with only 3 to 4 cm thick in the summer, after it has moulted.

Belvedere of the Étival lakes (D)

The belvedere looks over the two wild and preserved lakes that span the bottom of the dale. The glaciers that covered the Jura during the last glacial period disappeared around 18,000 years ago. Their weight and movement created depressions of varying depths which, when the glaciers melted, and thanks to glacial moraines, filled with water and formed lakes.

Attribution : PNRHJ / François Bailly-Maître

The Eurasian lynx, an emblematic animal of the Jura mountains (E)

This large and tall feline is elegant and mysterious. Its coat varies from beige to red with black spots, its head is round, and its ears are decorated by wisps of black fur. If all else fails, its short black tail leaves no margin for error should you have the luck of seeing this creature on one of its stops. The Eurasian lynx is capable of reaching speeds of 60 km/h when running!
